Lightroom is where the magic happens, after all. The app's interface has been streamlined, as well as the new and improved library. What's more, it's customizable with additional modules and views, as well as having the new Lightroom preset feature. You get a decent assortment of Lightroom presets, and I recommend them to get familiar with some of Lightroom's default options. The updated UI is easier to use, but if you're a fan of the classic Lightroom menu it's no problem to stick with it. The new preset feature flies at 70 frames per second which is enough to be fast and convenient. Once you use Lightroom, you can export a project as a.lrc, bitmap or a folder with.lrtemplate and choose the format you want to export into. You can also use a free trial for a week and test your untagged shots with the ability to develop and retouch your images. Unfortunately, this is only provided if you purchase the app from Amazon. The nice thing about the app is that it's still very stable, provides an intuitive interface and is fast, but whether the stuff is of real value to you can be debatable. Nonetheless, I'd highly recommend trying it out. An additional issue is that the app can't keep its settings in sync with your cloud services. For example, no matter what you change in Photoshop, Lightroom edits get out of sync faster. The search function, too, has been neglected and is on autopilot. If it doesn't matter to you if the features are easy to learn and use, you certainly don't have to care if the integration with other Adobe Creative Suite applications is annoying or a little confusing. The key feature for me—and I am not the only one—is the speed at which the program works. When you import a RAW file, it is much easier to work with than with the files generated by cameras. You can get rid of the noise easily and maintain important information coming from your shots, enhancing them. With a program like Lightroom you have to make changes on the basis of color or adjustments, or you can export the file, which means losing the information you have just worked with. Another problem is the inability to export images with Photoshop when running on energy-saving mode. Although we often have to close Power Point, the program continues to drain our battery. We can export the data from Power Point to PDF, which is a good solution, but it doesn't have to be that way. We may still be grumbling, but every time we finish an image, it saves it in a database and we can switch to another file. This is truly useful for those who have to manage thousands of images
