Afterward, we bring updates and new features to Photoshop like this. The biggest of these is a new Version History feature, which shows you all versions of your project copied from your original file. You can also copy the current version to a backup file, revert back to the original, or save the current version as a new Cloud Document link. These new features are still an early version (especially the Share beta, which is in beta) and a smaller sampling of the feature set found in the Master Collection, but they are most certainly a step in the right direction. And watch for the Photoshop 2023 launch at the 2018 Adobe Max conference, which will include more announcements. Overall, the fast pace of technological advance is good, but not for Adobe. They should be more on keeping pace with modern technology rather than falling behind. All the very best to Apple, Adobe and all the rest – but maybe a bit more focus on innovative customer software is needed. I remember being very interested in this new feature, so I wanted to stop and try it. After importing my open project I was able to stop using the screen, whereas before that was not possible. That option is now available, but it is only available in iPad compatible apps only. I would like to see that option work in the other apps as well. You only have to use the app once to get a good feel for how it works, and that always goes in your favor. Even if you've struggled to use the

traditional workflow in the past, you'll be able to deal with the new one much more easily.
