The other issue is that the exported file sizes do not follow the recommended setting for printing. I was not able to observe any significant difference in file sizes when I tried exporting a large number of files. While we saw some UI improvements during the Beta testing phase of the program in the Lightroom 5 release, I'd like to have a a few more, basic things with this latest release, such as better scrolling - from the bottom up. That is, I want to see subtle scrolling when using image adjustments and the like once in general use mode. This would solidify the new, faster and more responsive interface.

You can find him on image-editor.com or follow him on Twitter at @image-editor. Let's begin with the good news. As long as you haven't purchased any software on the most recent update day, you will see some pretty handy features. The first of these is the new "sketch" feature for the iPad. Adobe has made much-needed improvements to the iPad app while still keeping within Apple's guidelines. The app uses your pressure on the Apple Pencil to represent different colors, even in Photoshop images that don't permit them to exist in color. There is a tool palette in which you can edit shapes quickly and zoom in. This and the new resizable text and filters (which work with only very few specific images) are a welcome addition. Adobe's experiment with Sketch does not disappoint. I like the fact that it can switch

from traditional to cartoonish drawings. One topic of concern I have is how the app is essentially a camera RAW solution and can't handle RAW files. I do find that much of the software is still compatible with older Lightroom versions. Despite the fact that I prefer Lightroom, some features give me the indication that Adobe is going the "right" direction. For example, in the photo-editing process, the number of editing effects of a particular type (such as Grain, vignette and so on) is now shown as a pie chart on the left-hand screen. Perhaps, I have just been spoiled by Lightroom's Near(Pro) Edit feature, but this Adobe implementation is an improvement. Lightroom is in many ways still a powerful application.
